

What we claim is:

1. A connector adapter for coupling to a connector plug, which provides with memory function unit capable of untouchably performing,
5 from the outside thereof, writing-in operation and reading-out operation of necessary information;

said connector adapter comprising:

an antenna for untouchably reading-out the control information from the memory function unit when the connector plug is coupled to the
10 connector adapter; and

a detector switch switched in case of the coupling operation of the connector plug to the connector adapter, said antenna and said detector switch being provided on or near the connector adapter.

2. A connector adapter for coupling to a connector plug with memory
15 function unit for control information according to claim 1, in which the detector switch is mounted on the connector adapter.
